

**DataEdit: QR code last 15 characters**

For customers who need to output only the last 15 characters of a QR code. This DataEdit programming code will output the last 15 characters of any normal QR code.

This is a DataEdit scan code for use with the MDI3x00 family of modules and their associated scanner product family, such as the OPI3601 and the NLV3101.

For example, say we want only the last 15 characters of some unknown size of a QR code. For the cut script, we need to create two cut groups: the first is all characters from the beginning, and the second group is only the last 15 characters. The output is the second group.

Input bar code:

2PN401339G8061N;29213-06069;STP9038;000190330980360

**Input:**

2PN401339G8061N;29213-06069;STP9038;000190330980360

**Output:**

000190330980360

COMMAND	PLAIN SCRIPT	AS A COMMAND
Cut Script	\Su^(.*)(.{15})\$	[ED0'\Su^(.*)(.{15})\$'
Paste Script	[0,2]\x0D	[ED1'[0,2]\x0D'
Program #	1	[ED2Q1

**Full Data Edit script program:**

[ED0'\Su^(.\*)(.{15})\$'@ED1@[0,2]\x0D'@ED2@Q1

**Menu code script:**

@MENU\_OPTO@ZZ@ED0@\Su^(.\*)(.{15})\$'@ED1@[0,2]\x0D'@ED2@Q1@ZZ@OTPO\_UNEM@

**{SCAN THE CODE ABOVE TO PROGRAM THE SCANNER}**

The scan codes below can enable or disable the DataEdit program. The typical default is that the DataEdit program is enabled after the DataEdit programming code is scanned. But there may be a case in which the user wishes to disable the program temporarily.

**← Disable Data Edit Program #1**

@MENU\_OPTO@ZZ@ED4@Q1@ZZ@OTPO\_UNEM@

**Enable Data Edit Program #1 →**

@MENU\_OPTO@ZZ@ED3@Q1@ZZ@OTPO\_UNEM@

---

The following code will clear the data edit program script from memory:

@MENU OPTO@ZZ@ED0@''@ED1@''@ED2@Q1@ZZ@OTPO UNEM@

---
